

CONTINUITY & RESILIENCE

## ISO 27001 “On the Ground” Implementation Workshop

---

### Workshop description:

This workshop aims to focus on ISO27001:2013 standard practical implementation in an organization through a case study. Participants would be able to relate with their day to day pain points via this case study simulation. All 114 controls and in 14 Groups and 35 Control Objectives will be discussed at length.

Depending upon expertise level and requirement, the modifications made in new 2013 standard would also be discussed and made understood.

All the mandatory documents and records will be touched upon and templates would also be provided along with pitfalls of ISO27001 implementation and audit techniques will be discussed.

**This workshop will enable participants to DIY ISO27001:2013 implementation and maintenance in their respective organization along with knowing fail factors.**

### ISO27001 workshop Outcome:

- **People:** Awareness & understanding of people related controls, policy & procedures and the impact of not following; communication; feedback on confronting each other on behaviour; knowledge and skills to perform ISO27001 related activities
- **Process:** Were the security policy, processes and procedures fit-for-use and fit-for-purpose; were the procedures being adhered to?
- **Product:** Were security events and incidents detected and recorded; were products used for detection, prevention and recovery?
- **Partner:** Were all partner and supplier capabilities in the end-to-end chain aligned?

### Learning Objectives:

- Awareness and importance of ISO27001 standard
- Better understanding of the threats, risks and related controls
- Gain practical insights and tips on how to initiate and implement effective ISO27001 standard clauses
- See, feel and experience the impact of ‘attitude’ and ‘behavior’ as critical success or fail factors in ISO27001 implementation

### Who should attend?

- Information Security: Managers, Practitioners, Auditors, Project Managers, Consultants, Trainers, Experts
- Professionals from other domains like: Risk Management, Governance and Compliance, Information Technology
- Equally good for experts as well as the newcomers
